Hi! My name is Gonzalo. I am a passionate Software Engineer who thrives at the intersection of design and engineering.

I hold a Double Master's degree in ICT Innovation, with a focus on Computational Interaction. I have mostly worked ni JavaScript and TypeScript doing front end and data visualization. I also spent quite some time working ni the Machine Learning field, implementing algorithms for time-series real-time anomaly detection. I currently work as a full-time Software Engineer for Datadog, and on the side, I'm also a collaborating professor in the HCI department of Computer Engineering at UOC University.

I am passionate about working at the **intersection of design and technology**.

I consider myself a restless, curious and proactive person. In my free time I enjoy learning about technology and design and practicing nature sports.

I speak **Spanish** (native), **English** (Full Professional) and **French** (Professional Working Proficiency)
